

GUNTUKA MEGHANA REDDY

AI / ML ENGINEER IN THE MAKING • SOFTWARE DEVELOPER

Email: guntukameghanareddy7@gmail.com | Phone: +91 62810 38551 | Location: Hyderabad, India | GitHub & LinkedIn: Available Online

PROFESSIONAL SUMMARY

Enthusiastic and analytically driven B.Tech CSE (AI & ML) student with robust foundations in software engineering, machine learning pipelines, and predictive data modeling. Experienced in building multimodal NLP tools, clinical AI algorithms, and cybersecurity classifiers. Passionate about engineering high-reliability software and intelligent systems for high-impact teams.

EDUCATION

B.Tech in Computer Science & Engineering (AI & ML) — DRK Institute of Science and Technology (JNTUH) | **CGPA: 7.2**

Expected 2027

Senior Secondary / Intermediate (MPC) — Sri Chaitanya Junior College | **Score: 85%**
2021 – 2023

ICSE (Class X) — Sherwood Public School | **Score: 84%**
2011 – 2021

TECHNICAL SKILLS

Languages: Python, Java, SQL, C (Fundamentals)

Data Analysis & BI: Pandas, NumPy, Microsoft Excel, Power BI, Tableau

Machine Learning & AI: Scikit-learn, TensorFlow, PyTorch, NLP, Computer Vision, Speech-to-Text, OCR

Developer Tools & Systems: Git, GitHub, VS Code, Jupyter Notebooks, Linux Environments, Vercel

FEATURED PROJECTS

AI Multimodal Summarisation System *[Python, NLP, OCR, Speech-to-Text, Streamlit]*

- Engineered an end-to-end multimodal pipeline summarizing heterogeneous content including raw text, PDF documents, image scans, and video lectures.
- Integrated Tesseract OCR for text extraction from raster diagrams and Whisper-based speech-to-text transcription for audio/video assets.
- Implemented extractive and abstractive NLP summarization reducing document ingestion time by over 60% for academic research workflows.

AI MedTech Diagnostics & Prediction *[Python, Scikit-learn, Pandas, Healthcare AI]*

- Designed a predictive diagnostic machine learning model for healthcare risk classification and vital signal analysis.
- Preprocessed complex biomedical datasets with imputation, outlier mitigation, and feature standardization.
- Benchmarked logistic classification, random forests, and gradient boosting to optimize clinical recall and mitigate false negatives.

Phishing URL Detection Pipeline *[Python, Scikit-learn, Feature Engineering, Cybersecurity]*

- Constructed a cybersecurity classification engine identifying deceptive phishing links via lexical and structural URL attributes.
- Engineered 18+ heuristic features including domain token length, entropy, hyphen frequency, IP presence, and suspicious subdomains.
- Trained an optimized ensemble classifier achieving high precision detection to protect users from malicious redirection attacks.

HONORS & CERTIFICATIONS

2026 • Hackathon Winner (Collegiate Tech Innovation Summit)

2023 • Hackathon Finalist & Participant (JNTUH Innovation Hack)

2026 • Oracle Certified: Agentic AI Foundations (Oracle)

2026 • SQL Masterclass Certification (Simplilearn)
